

ENVIROGRAF® PRODUCT 15

INTUPLUG® INTUMESCENT FIXING PLUGS

DESCRIPTION

A plastic tubular plug containing flexible intumescent material, for fixing screws into holes in solid surfaces. Available 38mm long in a choice of two diameters (6mm or 8mm).

USE

Plugs can be used in door hinges to protect the hinges by cooling them down in a fire. The intumescent material expands around the hinges, cooling the metal. Can be used for fixing Product 13 (WPCS) and Product 16 into brick, block, and concrete ceilings/walls. Use 6mm or 8mm drill bits to suit the Intuplug. No.8 or No.10 screws can be used for holding timber to walls, giving fire protection to the screws. The intumescent plug can be used in addition to Product 71 hinge protection paper, as well as in numerous other fixing situations in which fire protection/cooling of the metal screws is required when fixed into solid materials.
