

Visqueen Zedex CPT High Performance DPC Jointing System

- A comprehensive system for ensuring integrity of Zedex CPT High Performance DPC laps and joins.
- Zedex DPC Jointing Tape for sealing laps.
- Zedex DPC Fixing Strip for applications where DPC cannot be built into the inner leaf.
- Zedex Joint Support Units to provide support when sealing joins in cavity trays.

Description

Zedex CPT High Performance DPC Jointing Tape is a double sided butyl based jointing tape. The use of a single release paper assists ease of application on site. Zedex CPT High Performance DPC Jointing Tape is suitable for use in the lapping and sealing of Zedex CPT High Performance DPC as well as in the surface fixing applications. All joins in lengths of DPC must be a minimum of 100mm lapped and bonded using Zedex DPC Jointing Tape.

Application

Zedex DPC Fixing Strip

Zedex DPC Fixing Strip is a 2m linear strip with predrilled holes and should be used when the construction programme or the design require the DPC to be post or surface fixed to the cavity face of the inner leaf. The surface should first be primed, the DPC then bonded to the inner leaf using Zedex DPC Jointing Tape and finally permanently secured using the fixing strip, mechanically fixed to the inner leaf at 150mm centres.

Zedex DPC Joint Support Units

Zedex DPC Joint Support Unit is a pre-fabricated unit, which provides support when sealing joins in lengths of DPC cavity trays. All joins between lengths of DPC cavity trays and with linear DPC cavity trays and pre-formed cavity tray units must be a minimum of 100mm, lapped and bonded and use a Zedex DPC Joint Support Unit. This unit provides support during the jointing procedure.

Technical Advice
