

IKO Geomembrane

Hydrocarbon Resistant Membranes

IKO Geomembrane is a multi-purpose single layer HDPE membrane. It is a safe solution for the protection of buildings and occupants from the effects of gases such as methane, radon and carbon dioxide.

IKO Geomembrane is ideal for brownfield sites or gas contaminated industrial areas, for example old petrol stations or former gas works, to prevent gases coming into the construction.

IKO Geomembrane withstands the effects of chemicals, acid, alkaline and salt solutions. The product is not affected by mildew and micro-organisms. Furthermore, the geomembrane cannot be penetrated by the roots from surrounding vegetation and the quality of drinking water is not affected.

Features and benefits

- For use on hydrocarbon contaminated sites
- Ideal for brownfield or industrial projects
- UV stabilised
- Vapour barrier against dangerous gases
- Resistance to weathering
- Life expectancy of minimum 25 years *
- Resistance to oxidation
- Good stress crack & tear resistance
- Strong welding properties
- Choice of sizes

* membrane to be covered within 1 year of installation

Product Details

Product Code	Product Description	Unit	Dimensions	Thickness	Colour
25329501	IKO Geomembrane	Roll	2.95m x 30m	1mm	Black
25329515	IKO Geomembrane	Roll	2.95m x 30m	1.5mm	Black
